"SPEED SQUINT" KNOWN WORLD OVER

OUIS CHEVROLET came to the United States in 1908 to ride as mechanician with Victor Hemery. Chevrolet stayed. And today his is a name that is known almost as well as that of Henry Ford or John N. Willys, for he is not only a race driver of unusual ability and courage, but his engineering genius has been immortalized in a car bearing his name. "It's his eyes" Bill Pickens, King of the Barnstorming impressarios used to say. Chevrolet drove for Bill during the lurid Buick racing days, and it was Chevrolet's eyes that he guarded and cherished their safety over all other parts of his anatomy. Chevrolet wears goggles but not on his eyes. They only serve to hold his cap tightly on his head. His "Speed squint" is famed the world over and is expected to serve him well in the Sixth International Sweep-

Speedway on May 30th. In this one, Chevrolet will drive a Frontenac, a car of his own creation, it up on an electric basis, so that on for the purchase and Sale of Public about which little or nothing is known. it will be more than a dark horse in hot, but healthful cup of tea with There are all sorts and conditions | the Indianapolis event, for everyone who knows Chevrolet knows to fear him just the right flavor of lemon. You of men and women, from the work as a racing competitor. His experience is as varied as it is spectacular, and he is no stranger to residents he is no stranger to accidents.

ELECTRICITY.

Why It Is Difficult For the Layman to Understand What It Is.

"What is electricity?" is a favor-Ite query with people who desire to "get a rise" out of a scientific man. And when he fails to answer it in the same simple fashion that he might treat the question "What is a biscuit?" the questioner cries out: "Aha! You profess to know all about electricity. Why, you can't even tell what it is!"

Now, to "tell what a thing is"that is, to define it-is to state its something more faosetienlar familiar questioner is think-

such single general relationship can be stated between electricity and matter. But, this being so, it azine, was the first signed agreewould be just as correct to say that we do not know what matter is as the oldest record now in the ar-FRONTENAC that we do not know what electrici- chives of the New York Stock Exty is. THE STOCK EXCHANGE

Date of the First Agreement Among New York's Brokers.

In the early part of March, 1792, the first notice was printed of the opening of a stock exchange office at 22 Wall street by A. L. Bleecker & Sons, J. Pintard, McEvers & Barclay, Cortlandt & Terrers and Jay & Sutton. These several firms held auctions of stock each day at noon, selling in rotation to insure equal opportunities for each other.

Some of the broker specialists resented such a restricted organization, and on March 21 a meeting was called of the dissatisfied brokers for purposes of protection, and a committee was appointed to provide a suitable room in which to assemble and to suggest such rules and regulations for conducting not to be derived that no their business as the committee deemed necessary. The final result of this meeting, says Moody's Magment among dealers in securities,

is familiar, and he demands a state This organization had no local ment of the latter in terms of the habitation for conducting exchange former, illogical though this may business.
